-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-2,4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kammiller et al. (U.S. Patent # 5,619,405) in combination with Lee (U.S. Patent # 5,644,214)).

Kammiller et al. disclose the claimed invention a multiplier-divider circuit for power factor correction circuit (figure 2-4), including a first multiplier-input (figure 2, item 66), a second multiplier-input (figure 2, item 76), a divisor-input (figure 2, item 60). However Kammiller et al. does not disclose the utilization of the technique for a constant current source and second multiplier-divider stage. Lee teaches the utilization of the similar technique for a constant current source (figure 4, item 62) and second multiplier-divider stage (figure 4, item 48). It would have been obvious one having an ordinary skill in the art at the time the invention was made to modify Kammiller et al.'s power factor correction circuit by utilizing the technique taught by Lee for the purpose of improving power factor and removing harmonic noise.

***Allowable Subject Matter***

3. Claims 3 and 5-24 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
